

Assignment: Tableau Trailhead Modules & Data Storytelling Viz

Overview

You will complete two Tableau Trailhead modules asynchronously and submit proof of completion plus a simple Tableau Public visualization via GitHub.

Deliverable: New GitHub repository: [tableau_trailhead_basics](#)

Due: See course LMS / syllabus for due date

Learning Objectives

By completing this assignment, you will be able to:

1. Explain what Tableau Public is and how it supports data storytelling and portfolio-building.
 2. Describe key principles of effective data storytelling with visualizations.
 3. Configure a basic Tableau data model using multiple related tables.
 4. Connect Tableau concepts to healthcare-relevant or health-adjacent data scenarios.
-

Required Modules

These modules are part of the **Tableau Hands-On Challenges** Trailhead content:

1. **Data Storytelling with Tableau Public** (Approx. 50 minutes) :contentReference[oaicite:0]{index=0}
<https://trailhead.salesforce.com/content/learn/modules/data-storytelling-tableau-public>
2. **The Tableau Data Model** (Approx. 35 minutes) :contentReference[oaicite:1]{index=1}
<https://trailhead.salesforce.com/content/learn/modules/the-tableau-data-model>

You must complete each module and earn the associated **Trailhead credit (badge/points)**.

Instructions

1. Set Up Accounts

1. Go to **Trailhead**: <https://trailhead.salesforce.com>
 - Create or sign in with an account that you are comfortable using for coursework.
 2. Go to **Tableau Public**: <https://public.tableau.com>
 - Create a free Tableau Public account (or sign in if you already have one). :contentReference[oaicite:2]{index=2}
 - Confirm you can access your **profile** and create/save vizzes.
-

2. Complete the Two Trailhead Modules

Complete both modules listed above:

- **Data Storytelling with Tableau Public**
- **The Tableau Data Model**

For each module:

- Work through all units and interactive “hands-on challenge” activities.
 - Ensure the module shows as **completed** in your Trailhead profile and that you have received the corresponding **badge/points**.
-

3. Create and Publish a Tableau Public Visualization

Using **Tableau Public**:

1. Choose a **non-sensitive dataset** (no real PHI/PII). Preferably:
 - A healthcare or health-adjacent dataset (e.g., hospital admissions, public health stats, fitness/wellness, demographics), **or**
 - A public dataset of your choice (e.g., sports, social determinants, Great British Bake Off example used in Trailhead). :contentReference[oaicite:3]{index=3}
 2. Build **one** basic viz or small dashboard that:
 - Tells a simple, clear **data story** (e.g., “Admissions have increased in X group”, “Readmissions vary by age group”).
 - Uses at least **two different visual elements** (e.g., bar chart + line chart, map + bar chart, etc.).
 3. **Publish** the viz to your Tableau Public profile.
 4. Copy the **public URL** of your visualization.
-

4. Capture Evidence of Completion

Collect the following:

1. Trailhead Evidence

- From your Trailhead profile or module pages:
 - Take a **screenshot** showing:
 - Your **name**
 - The **module title**
 - The completion status and/or badge/points for:
 - *Data Storytelling with Tableau Public*
 - *The Tableau Data Model*
- Save these in image files (e.g., **.png**, **.jpg**).

2. Tableau Public Viz Evidence

- Go to your published viz on Tableau Public.

- Take a **screenshot** of the visualization page showing:
 - The **viz itself**
 - Your **author name** and viz title.
 - Copy the **shareable URL** of the viz.
-

5. GitHub Submission Requirements (**tableau_trailhead_basics**)

1. Create a new **public GitHub repository** named: **tableau_trailhead_basics**.

2. In this repository:

- Add a **README.md** file.
- Create an **images/** folder (or similar) and upload:
 - Screenshot(s) showing completion of:
 - Data Storytelling with Tableau Public
 - The Tableau Data Model
 - Screenshot of your Tableau Public visualization.

3. In **README.md**, include:

1. Evidence Section

- Embedded images of:
 - The two completed Trailhead modules.
 - Your Tableau Public viz.
- The **public URL** to your Tableau Public viz.

2. Short Written Reflection (4–6 sentences total)

Address all of the following in a single concise paragraph:

- **Data Storytelling:**

One principle or best practice from *Data Storytelling with Tableau Public* that you found most important, and how it shaped the viz you created.

:contentReference[oaicite:4]{index=4}

- **Data Model:**

One key concept from *The Tableau Data Model* (e.g., relationships vs joins, working with multiple tables) and why it matters when working with real-world datasets.

:contentReference[oaicite:5]{index=5}

- **Healthcare Scenario:**

A brief healthcare-specific example where using Tableau's data model and visual storytelling would be useful (e.g., tracking patient outcomes across multiple tables such as visits, labs, and diagnoses) and why Tableau is a good fit.

4. Submit the **GitHub repository URL** in the course LMS for grading.

Grading

- Complete both Trailhead modules and earn credit for:

- **Data Storytelling with Tableau Public**
- **The Tableau Data Model**
- Publish at least **one** Tableau Public visualization.
- Provide a valid GitHub repo link to **tableau_trailhead_basics** that includes:
 - Screenshots demonstrating completion of both Trailhead modules.
 - Screenshot and URL of your Tableau Public viz.
 - A reflection paragraph (4–6 sentences) that:
 - References a key idea from data storytelling.
 - Explains one concept from the Tableau data model.
 - Describes one healthcare-specific use case for Tableau.

Late or incomplete submissions may receive reduced or no credit.
